# LEADING MANUFACTURER OF SOLAR POWERED LIGHTS SINCE 2001

The **Imperial II** solar powered lamp series are the perfect solar lamps for any park or community looking for a product which is maintenance free, eco-friendly and cost effective.

One of the biggest challenges a Park or Community owner is faced with, is how to keep the costs down. With our solar powered technology, we are harnessing the sunlight as a constant energy source that costs you nothing and reduces your overall power bill.

Since 2013 when the **Imperial II** was first introduced to the market, Gama Sonic has sold over 10,000 units all over the country making it our number one best seller. Parks, Communities, HOA's, Municipalities and Residents looking for a brighter, longer lasting solar light found their answer with the **Imperial II** series.

Gama Sonic has been the leading manufacturer of solar powered lamp post lights for the past 15 years, constantly using the latest technology as well as innovative designs to include more than 20 utility and design patents. This allows us to achieve higher and brighter results in the solar lighting market.

The **Imperial II** solar lights are commercial grade and bring an alternative to traditional lighting that can be easily installed anywhere in your park or community without electrical wiring, digging, trenching or running gas, which saves time and money.

**“Commercial property owners whom have switched to the **Imperial II** like myself have found these lights are more cost effective, easy to install and create a great atmosphere.”**

– Dennis Wagoner (owner of 9 Mobile Home Parks)
